

Fully Automatic Satellite TV System

The SatKing Pro Max Plus is the most advanced automatic Satellite TV System on the market. Utilising the latest in flat panel design, the unit is very compact yet powerful. The Pro Max Plus provides Australia wide coverage for all VAST & Foxtel TV channels. You can watch TV all around Australia without having a big satellite dish mounted on the roof of your RV

Combining the Pro Max Plus with either a VAST or Foxtel satellite receiver provides a similar to being at home experience with no need to sign in and out of different network apps, no buffering. Watch real live TV all with no monthly rental or subscription fees like internet TV options

The Pro Max Plus has a Quad output LNB as standard so it is suitable for VAST, Foxtel and Foxtel IQ without the use of splitters and switches. The Pro Max Plus is already high definition MPEG4, so as TV networks change to MPEG4 HD the Pro Max Plus will continue to provide crystal clear HD pictures.

The Pro Max Plus requires a very small amount of roof space on the van. No more compromises with solar panels and other competing products. Also the Pro Max Plus is not affected by wind

The SatKing Pro Max is user friendly, simply select your satellite, press "OK" The satellite system automatically searches for you. Locking to the satellite in just 80 seconds. Software updates easily applied via your mobile phone

The SatKing Pro Max has a built in 24 channel GPS system, GPS allows the Pro Max Plus to know exactly where you are, saving on search times. There is no need to manually change settings for different locations across Australia

The SatKing Pro Max Plus is Australia's #1 selling satellite TV system made for harsh Australian conditions. The unit is backed by a 3 year Australian warranty

Key Features

- ⇒ Fully Automatic Self Aligning, just turn on and press "OK"
- ⇒ Receives VAST and Foxtel Satellite TV (Set top box required)
- ⇒ Australia wide coverage
- ⇒ Quad Output LNB suits Foxtel and VAST Twin Tuner Sat STB's
- ⇒ Built in 24 Channel GPS
- ⇒ Low power consumption, after lock power use is just 4 watts
- ⇒ Suits Caravan, Motorhome, Motor Vehicle use
- ⇒ Automatic Retraction when you Exceed 20KPH
- ⇒ Automatic LNB Skew
- ⇒ Powerful DC Motors with Metal Gears
- ⇒ Detailed Instructions and Roof Mounting Kit Included
- ⇒ 3 Year Warranty
- ⇒ Not affected by high winds like the large round dishes
- ⇒ Bluetooth connectivity for easy software updates
- ⇒ Designed in Australia for our harsh conditions
- ⇒ Made in South Korea

Physical Specifications

Product Dimensions: 520x600x246mm
Gift Box Dimensions: 620x550x317mm
Product Weight: 18.5kg
Gift Box Weight: 26.8Kgs
Operating Temperature Range: -30°+60°C

LNB

Polarization: Horizontal/Vertical
Output: Quad
L.O: 10700
Input Frequency: 11.75-12.75GHz
Output Frequency: 950-2150MHz

Antenna Adjustment Range

Elevation: 5°-90°
Azimuth: 390°
Skew: -60° ~+60°

Satellite Searching Time

Searching Time: 80 Sec (Average)

Power

Input Voltage: 12V or 24V Auto Selection
Consumption search mode: 30W (Average)
Consumption after locking: 4Watts

Satellite TV, No Buffering or failure to load like internet options

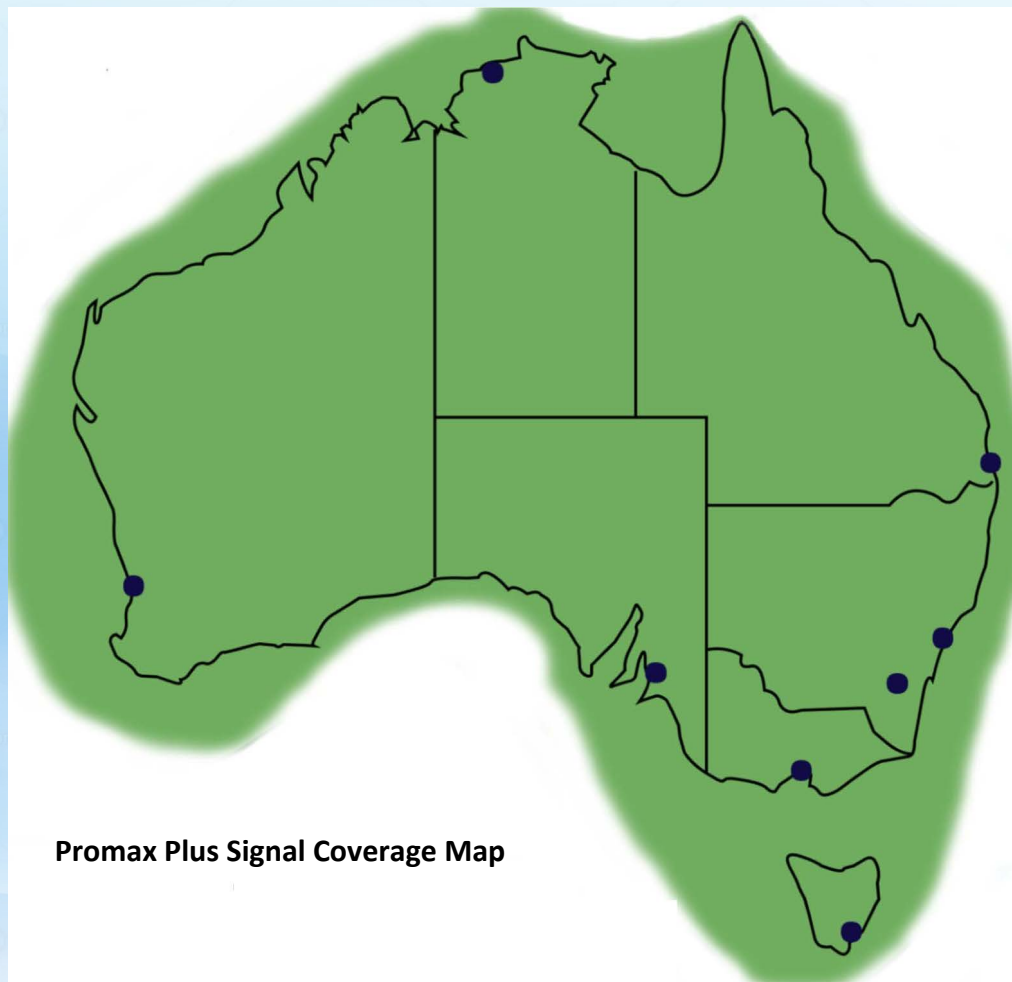

Coverage Explained

The SatKing Pro Max Plus provides coverage across all of Australia for all VAST and Foxtel channels. Areas in green you should expect to receive all channels. So it doesn't matter if you are heading from Broome to Perth across to the Alice and then to Mount Isa and down to Tassie the Pro Max has you covered.

Satellite TV comes from the sky, to receive the satellite TV signal you will need a clear view to the north not obstructed by trees. The signal can also be affected by heavy rain, if this is the case just wait for the rain event to pass and normal service will resume.

The Pro Max Plus unlike the large round dishes is not affected by high winds, there is no need to lower the dish in high winds and you can continue to watch TV. High winds don't cause the TV picture to pixelate with the Pro Max Plus like the standard dishes that move in the wind.

The Pro Max Plus uses advanced flat panel technology meaning the gain of the antenna is greatly increased compared to conventional satellite dishes. Combine this with very precise alignment technology and the unit automatically fine tuning once the satellite signal is locked making the Pro Max Plus far superior to other options in the market.

Promax Plus Signal Coverage Map

How to Watch TV Explained

The SatKing Pro Max Plus is the automatic satellite TV system required to receive the satellite TV signal but to watch TV you will need to connect a set top box to the Pro Max Plus.

There are two options, you can either buy a VAST receiver or bring your own Foxtel or Foxtel IQ satellite set top box. Using either is simple, just plug your receiver or set top box into the Pro Max Plus and you will be watching TV in a minute or so.

VAST TV Explained

VAST is the most popular method of watching TV with your Automatic satellite TV system. VAST is basically the same channels as you receive in the capital city but with commercials from regional Australia. You receive ABC, SBS, 7, 9, 10 and their secondary channels like ABC2, GO, Gem, One, Eleven, 7Two and 7Mate. VAST receivers are available from all SatKing dealers. With VAST there are no subscription charges.

Foxtel Explained

If you choose to bring your own Foxtel satellite set top box, just simply plug the set top box into the Pro Max Plus and within a minute or so your Foxtel STB will load available channels. Note catch up TV services are delivered by the internet and can't be received via satellite TV and subscription charges apply. You can also use Foxtel and VAST STB's together to get the best of both worlds.

Why Satellite TV?

Satellite TV is still the most popular way to watch TV whilst you are traveling around Australia. Yes there are now other internet TV options, but the internet options come with their own problems. With satellite TV it doesn't matter if 2 people or 2 million people are watching a program, satellite TV is receive only so there is no extra demand placed on satellite TV as viewing numbers increase. Below we have detailed the main advantages of satellite TV:

- No buffering or loading issues.
- No logging on issues when viewing demand is high.
- Real live TV, internet TV can be many minutes behind "live".
- VAST Satellite TV has no monthly subscription, equipment rental or usage fees
- Similar to at home experience, scroll up and down through channels with no need to exit in and out of different network apps.
- Low power consumption, satellite TV uses around 1AH, not 4AH to 8AH like satellite internet uses.
- Government advice is to rely on Satellite TV in emergency situations where the internet can fail or become unreliable.

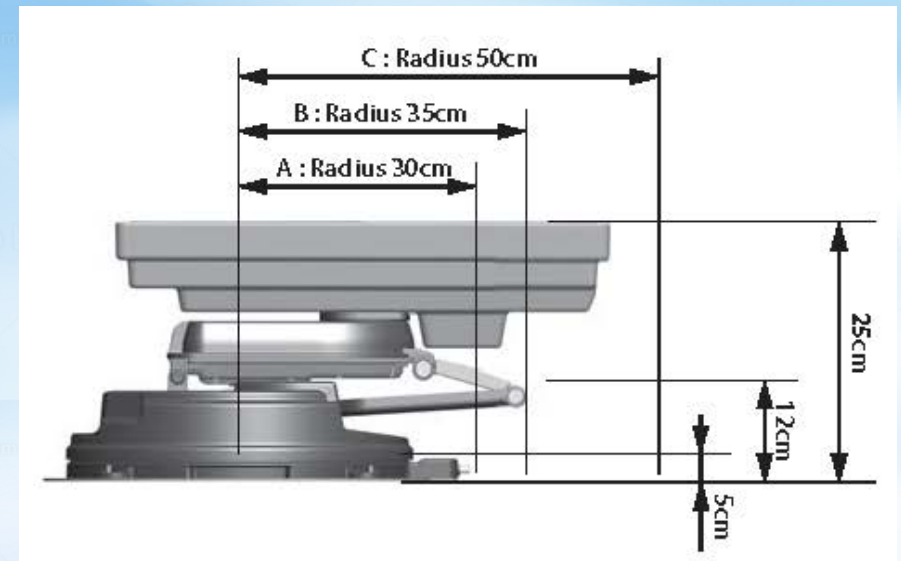

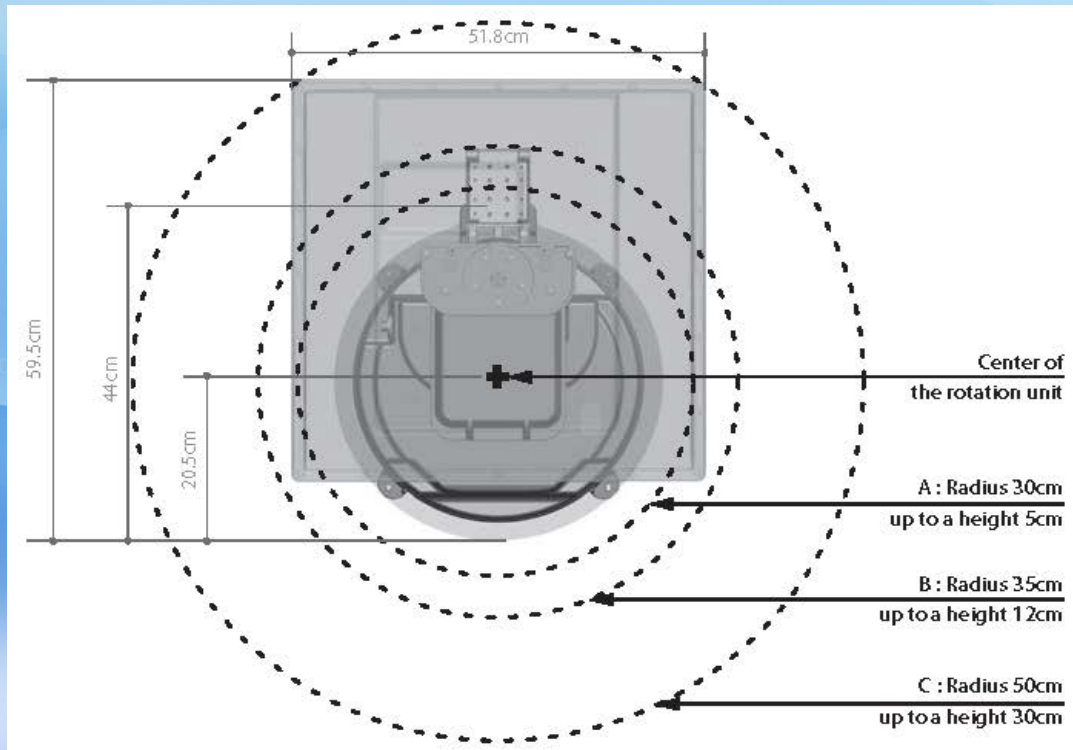

Installation Explained

The SatKing Pro Max Plus requires only a small amount of space to be installed, in general half the area of a conventional old style round dish. No longer do you have to position your motorised system in the rear corner of the van and have long cable runs. The unit can be installed where it is convenient or even directly above your TV making installation even easier. Diagrams below show the area required for the Pro Max Plus to operate, in general the Pro Max Plus needs clearance of 50cm from the center of the unit but as per some existing products on your roof can be within the 50cm exclusion area depending on their height.

How to Intall

With the Pro Max Plus you can either do a self install or get your caravan dealer to install the unit for you. SatKing & SatKing dealers can also recommend installers in your local area to do the complete installation for you.

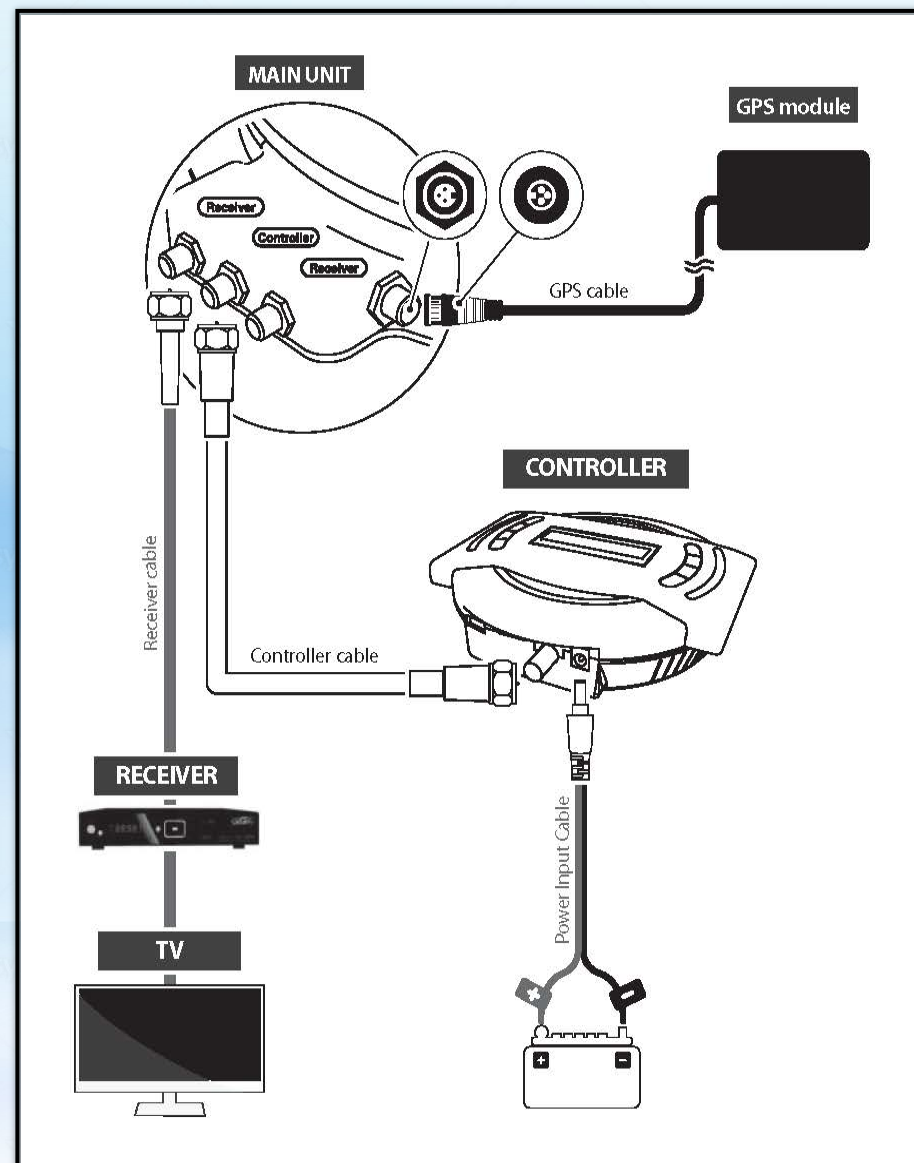

What's Included

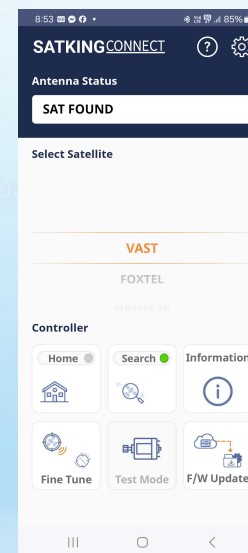

Easy to Install

Compact Indoor control with LCD display

Operate & software updates via the Satking connect app

Don't have a satellite receiver yet?

Add Australia's best VAST satellite receiver. The SatKing DVBS2-1000CA and the Pro Max Plus are the perfect match. VAST receivers provide similar TV channels to the local TV you watch at home.

Advanced Flat Panel Technology

The Pro Max Plus uses multiple flat panel antenna grids phased together to greatly increase antenna gain. This technology is commonly used in the military and means the Pro Max Plus automatic satellite TV system can be physically smaller than other automatic systems but still have Australia wide coverage.
